

Technician in electronic engineering RFID/NFC (H/F)

- Place : Zaragoza

Mission

You will work with the Research & Development team of the company. Directly related to our Technical Director, you are working on the design and implementation of our RFID / NFC HF / UHF antennas projects. In this context, you should be able to intervene at all stages of the implementation of our solutions:

- Definition of specifications
- Selection of technical solutions,
- Production of prototypes
- Test
- Industrialization

Skills

- Knowledge acquired:
Antennas vocabulary and physical sense; hardware RF: resonant system, HF / UHF amplifier, RF simulation software, manipulation tools such as network analyzer, oscilloscope and a soldering iron.
- Bilingual English (90% of clients and partners of the company are abroad)
- French would be appreciated

Profil

- Academic:
Bachelor in electronic or telecommunication Engineering would be appreciated
- Experience
The first successful experience of at least one year in R & D Hardware HF / UHF.

Human qualities

Strong taste for innovation, adaptability and significant practical sense.
